OffshoreGrid Final Report – Erratum

Due to short deadlines for designing and printing the final report, the printed version contains some errors. They are listed below, along with their correction.

- **Figure 1.1 p. 9**
  Sixth value in legend should be ‘System benefits over 25y’ instead of ‘Annual generation benefits’.

- **Figure 4.1 p. 32**
  Figure was stretched without stretching the labels on the x-axis.

- **Figure 4.2 p. 33**
  Figures have been switched in the designed version. Left figure shows onshore wind power, right figure shows offshore wind power.

- **Figure 4.8 p. 41**
  Upper graph is wrong. Largest value on axis should be ‘1000’. Values range between 300 and ~900 €m.

- **Figure 4.18 p. 53**
  Title Y-axis should be: ‘Maximum distance between hubs (km)’

- **Figure 4.24 p. 63**
  Secondary Y-axis title should be ‘Annual system generation cost (red) (€bn)’

- **Figure 4.36 p. 73**
  One series is missing both in the legend and in the graph, namely the circuit length of the wind farm connection cables of the ‘hub base case 2030’. This value appears in the three last bars, and is equal to 11420 km.

- **Figure 4.38 p. 74**
  Sixth value in legend should be ‘System benefits over 25y’ instead of ‘Annual generation benefits’. → see correction Figure 1.1 above.

A corrected Final Publication is available at: [www.offshoregrid.eu](http://www.offshoregrid.eu)

Furthermore please find on the website:

- Detailed technical maps as pdf (containing details on the cable technology used)
- Excel tables of the case-independent model (final report chapter 4.4)
- The Annexes to the report
